| V2.1    | 13/03/2020 | Clearer identification of sections 1 and 2 and how to read them  
Section 2 expanded with further information for setting-specific groups  
New case definition  
All sections updated to reflect current move to delay phase  |
| V3.2    | 17/03/2020 | Update on household isolation, social distancing.  
Aligned with newly published guidance on specific settings  |
| V3.5    | 23/03/2020 | Update on advice for educational settings  
Included advice for homelessness settings  
Update on advice for transport sector and points of entry  
Links to external points of information updated  |
| V3.6    | 23/03/2020 | Update on shielding advice                                                                                                                        |
| V3.7    | 24/03/2020 | Update on advice for educational settings during lock down                                                                                  |
| V3.8    | 27/03/2020 | Update for UK Border Force  
Update to Educational settings                                                                                                                     |
| V3.9    | 03/04/2020 | Update in light of social distancing  
PPE Revisions                                                                                                                                             |
| V4.0    | 14/04/2020 | Personal travel section added  
Organisational and workplace arrangements section added  
Links to external points of information updated  
Gypsy/Traveller section added  |
| V4.1    | 30/04/2020 | Addition of maintenance worker section  
Face covering information added  
Amended references to ‘social distancing’ to ‘physical (social) distancing’  |
| V4.2    | 01/05/2020 | Addition of testing section                                                                                                                       |
| V4.3    | 20/05/2020 | Case definition updated                                                                                                                          |
| V4.4    | 26/06/2020 | Test and protect advice added throughout document  
Stay at home advice strengthened to include asymptomatic COVID-19 diagnoses throughout document  
What to do if I have symptoms advice updated in section 1.1  
Personal and work travel advice updated in section 1.5  
Addition of PPE advice in section 1.6  
Updated advice on testing of workers in section 1.10  
Additional advice added to foreign travel section 1.11  
Amendments to homelessness section 2.7  |

Scope of this guidance

Key principles of measures taken to minimise the spread of COVID-19 are determined at the UK level. The central aim of this guidance is to provide a clear and concise overview of these measures with Scotland specific adaptation e.g. reference to Scottish services, where appropriate.

In scope

These key measures include but are not limited to:

1. **Physical (social) distancing** and **stay at home** guidance.
2. **Shielding** of very high risk individuals.
3. Stay at home guidance for people who have symptoms or have a COVID-19 diagnosis (whether they have symptoms or not), and their household members (household isolation).
4. **Test and Protect**
5. **Infection prevention and control** (hygiene measures) and PPE.

Where sector or occupation specific guidance is required to operationalise the measures then this will be led by the key national organisation with expertise in the specific area with expert health protection and infection prevention and control input and advice as required. We support development of customised guidance by providing specific health protection and infection prevention control advice where this is within our technical and scientific competence.

Some broad principles of how guidance may be adapted is set out in our settings specific section. Some detailed setting specific guidance is included where the expertise for this is within the health protection remit.

Out of scope

This guidance does not seek to cover details of operational arrangements or issues such as occupational health, although the core information outlined here may be useful for informing work in these areas.

Whilst this document summarises and signposts public facing information, it does not seek to replicate the detailed and comprehensive resources provided on [NHS Inform](https://www.nhsinform.scot).
Settings and topics included within this guidance

This guidance is to support those working in a range of settings outside of health and social care to give advice to their staff and users of their services about the novel coronavirus disease (COVID-19). For guidance on social and residential care settings please follow this link.

This guidance covers:

- What COVID-19 is and how it is spread.
- Advice on how to prevent spread of all respiratory infections including COVID-19.
- Advice on what to do if someone is ill in a workplace or other setting.

Where relevant, additional setting-specific information and advice is also included in, or is linked to from, this guidance.

How to read this guidance

**Section 1:** contains core information that is applicable to all settings and provides the advice that you need to follow for your setting. Some settings have unique requirements which are detailed in Section 2.

**Section 2:** contains additional information and guidance for specific settings.

This guidance is based on what is currently known about COVID-19.
Health Protection Scotland (HPS) (now part of Public Health Scotland) will update this guidance as needed and as additional information becomes available.
Section 1
Information and guidance for all non-healthcare settings

1.1. Background

What is coronavirus disease (COVID-19)?
COVID-19 is the name given to the disease caused by a new strain of coronavirus which was first identified in Wuhan City, China in December 2019. COVID-19 was declared a pandemic by the World Health Organisation on 12 March 2020.

We now have spread of COVID-19 within communities across Scotland. This means that everyone in the community should take extra precautions to ensure they practice good hand hygiene, physical (social) distancing, and follow “stay at home” advice. Further information on these precautions can be found on NHS Inform.

What are the typical signs and symptoms of COVID-19?
Common symptoms include:
- New continuous cough
  
  and/or

- High temperature
  
  and/or

- Loss of/ change in sense of smell or taste.

These symptoms can range from a mild-to-moderate illness to severe acute respiratory infection. For most people the symptoms of COVID-19 will be mild. COVID-19 is more likely to cause severe symptoms in people with weakened immune systems, older people, and those with long-term conditions like diabetes, cancer and chronic lung disease.

What should I do if I have symptoms?
Anyone developing symptoms consistent with COVID-19 (new continuous cough or a high temperature or loss of/ change in sense of smell or taste), however mild, should stay at home for 7 days from the onset of symptoms as per existing advice. You should consult NHS Inform for further information on what to do next and when to seek further medical advice. As part of the ‘Test and Protect’ approach, everyone with symptoms is encouraged to get tested. You can book a test through NHS Inform. Household members of those with symptoms should follow the guidance for households with possible COVID-19 infection on NHS Inform.

What should I do if my symptoms are worsening?
Seek prompt medical attention if your illness is worsening. If it is not an emergency, contact NHS 24 (phone 111). If it is an emergency and you need to call an ambulance, dial 999 and inform the call handler or operator that you may have coronavirus (COVID-19).
How is COVID-19 spread?
COVID-19 is spread through respiratory droplets produced when an infected person coughs or sneezes. This is thought to be the main way the infection is transmitted between people and is most likely to happen when there is close contact (within 2 metres) with an infected person who is symptomatic. It is likely that the risk of infection transmission increases the longer someone has close contact with an infected person.

There are two routes by which COVID-19 can be spread:

- **Directly:** from close contact with an infected person (within 2 metres) where respiratory secretions can enter the eyes, mouth, nose or airways. This risk increases the longer someone has close contact with an infected person.
- **Indirectly:** by touching a surface, object or the hand of an infected person that has been contaminated with respiratory secretions and then touching own mouth, nose or eyes.

How long can the virus survive on environmental surfaces?
Under most circumstances, the amount of infectious virus on any contaminated surfaces is likely to have decreased significantly by 72 hours.

We know that similar viruses are transferred to and by people's hands. Therefore, frequent hand hygiene and regular decontamination of frequently touched environmental and equipment surfaces will help to reduce the risk of infection transmission.

1.2. What should individuals do to prevent spread of COVID-19?
There is currently no vaccine to prevent COVID-19.

The following measures are recommended to help reduce the spread of COVID-19 and to protect people at increased risk of severe illness:

**Individuals should:**

- Follow the physical (social) distancing and stay at home advice.
- Follow the shielding advice if this applies to them.
- Follow the guidance to self-isolate if you or a household member has symptoms of COVID-19 or have a COVID-19 diagnosis (whether they have symptoms or not). Details are available on [NHS Inform](https://www.nhsinform.scot).
- Follow [Test and Protect](https://www.nhsinform.scot).
- Follow hygiene advice such as handwashing.

**Physical (social) distancing** measures should be followed by everyone, including children, in line with the government advice to [stay at home](https://www.gov.uk/guidance/stay-at-home). The aim of physical (social) distancing measures is to slow the transmission of COVID-19. Up to date information can be found on
the NHS Inform website. Note that more restrictive shielding advice should be followed by individuals at risk of severe infection (see below).

**Shielding** is a measure to protect people, including children, who are at very high risk of severe illness from COVID-19 because of certain underlying health conditions. The aim of shielding is to minimise interaction between these individuals and others to protect them from coming into contact with the virus that causes COVID-19. People with these serious underlying health conditions are strongly advised to rigorously follow shielding measures in order to keep themselves safe. Further information, including the list of underlying health conditions that place people at very high risk, is available on the NHS Inform website.

**Guidance for households with possible COVID-19 (Stay at home)** measures will slow the community spread of COVID-19. This means that anyone who has symptoms of COVID-19 or have a COVID-19 diagnosis (whether they have symptoms or not) and anyone else living in the same household should follow ‘stay at home’ advice on NHS Inform.

**Test and protect** is a public health measure designed to break chains of transmission of COVID-19 in the community. This approach operates by identifying cases of COVID-19, tracing the people who may have become infected by spending time in close contact with them, and then supporting those close contacts to self-isolate, so that if they have the disease they are less likely transmit to it to others. Further details can be found on the Scottish Government website and NHS Inform.

**Good hygiene practices to help prevent spread**

- Wash hands frequently with soap and water for 20 seconds, particularly before and after eating.
- Use alcohol based hand rub where available if no access to soap and water.
- Avoid touching eyes, nose and mouth with unwashed hands.
- Avoid direct contact with people that have a respiratory illness wherever possible.
- Avoid using personal items (e.g. mobile phone) of people that have a respiratory illness wherever possible.

Cover the nose and mouth with a disposable tissue when sneezing, coughing, wiping and blowing the nose. Dispose of all used tissues promptly into a waste bin. If you don't have any tissues available, cough and sneeze into the crook of the elbow. Wash or use alcohol based hand rub to clean hands at the first opportunity.

**1.3. Organisational and workplace arrangements during COVID-19**

This guidance applies to all workplace settings outside of health and social care, however more specific guidance for Healthcare Settings and Social or Community Care and Residential Settings should be followed where this applies.
See Scottish Government’s [Coronavirus (COVID-19): business and social distancing](https://www.gov.scot/publications/coronavirus-covid-19-business-and-social-distancing/) and any relevant Scottish Government sector guidance. All organisations and individuals must ensure that they adhere to up to date guidance on recommended public health measures from Scottish Government. This includes business and physical (social) distancing guidance and standard health and safety requirements. Consider which groups of people (e.g. staff, contractors, volunteers, service users and visitors) need to be included in applying the guidance to your setting.

The key public health measures to reduce the spread of infection and preventing infection in vulnerable people are described in detail on [NHS Inform](https://www.nhsinform.scot).

- **Physical (social) distancing** and **stay at home** guidance.
- **Shielding** of very high risk individuals.
- **Stay at home** guidance for people who have symptoms or have a COVID-19 diagnosis (whether they have symptoms or not), and their household members (household isolation).
- **Test and protect**.
- **Infection prevention and control** (hygiene measures) and PPE.

1. **Physical (social) distancing and stay at home guidance**

   Ensure that all members of the organisation are aware of the requirement to follow physical (social) distancing and stay at home guidance and support them in doing this. Consider the additional demands that will be placed on people and your organisation by following advice on physical (social) distancing and put in place resilience planning to support this.

   Stay at home guidance is in place for everyone. Work that can be done remotely should be done from home. Where the work cannot be done from home then physical (social) distancing must be followed. Individuals who are at increased risk of infection (but not in the shielding category) are advised to follow the physical (social) distancing advice stringently and this must be taken into consideration. Note individuals following shielding or isolation guidance must not attend the workplace.

   Where sectoral guidance is in place this may be followed as it gives a tailored approach.

   It is essential that the clear recommendation of the 2m rule outlined in the physical (social) distancing guidance is adhered to. There are however circumstances where the 2 m rule cannot be followed despite all possible steps being taken to try to maintain this; in those circumstances a risk based approach should be used. A risk assessment should be conducted that considers the following aspects and the outcome should be documented:

   - Is it an essential role (see key worker guidance)?
   - Is the task being done essential?
   - Is it essential that the task is done now or can it be deferred?
Can the task be done in a different way so that 2m distance can be maintained?

- Yes – do this and document a justification that describes why the process has changed from usual practice, make sure your usual Health and Safety considerations are applied.
- No – then adapt the task to ensure physical (social) distancing is adhered to as far as possible and document this.
  - Minimise the time spent at less than 2m
  - Maintain 2m distance for breaks and lunch
  - Maximise the distance, where the 2m distance cannot be kept, always ensure the greatest distance between people is maintained
- Apply environmental changes to minimise contact such as physical barriers, markings or changing placement of equipment or seating (e.g. a screen between staff and customers, or tape markings on the floor to show the 2 metre distance required).
- Consider changes in working practices (stagger times at which work is done or breaks are taken; restructure work flows to allow for physical (social) distancing to be implemented).
- Ensure that good hygiene practices and all infection prevention and control measures are implemented fully.

2. Shielding of extremely high risk individuals

People who are shielding, designated as ‘at very high risk’ must not attend any workplace outside the home setting, they are to remain in the home. Managers and/or occupational health services must ensure that these individuals do not attend the workplace. Household members of individuals who must shield do not need to adhere to shielding themselves.

3. Stay at home guidance

Organisations must ensure that all members of the organisation are aware that they must stay at home if they or a household member develop symptoms of COVID-19 or have a COVID-19 diagnosis (whether or not they have symptoms) and they should support them in doing this. Further details are available on NHS Inform.

4. Test and protect

Organisations should be aware of up to date advice on the test, trace, isolate, support approach, and support their members to follow this. More information is available from the Scottish Government website and NHS Inform.

5. Infection prevention and control (hygiene measures)

Organisations should:
Promote good hand hygiene for all staff, volunteers, contractors, service users and visitors.

Ensure that adequate facilities are available for hand hygiene, including handwashing facilities that are adequately stocked or alcohol based hand rub at key areas (e.g. entry and exit points).

Ensure workers are aware they must not attend work with COVID-19 symptoms or if they have a COVID-19 diagnosis (whether they have symptoms or not). They must also not attend work if they are required to self-isolate (through household isolation or test and protect measures).

Ensure that everyone knows what to do if someone becomes symptomatic whilst at work.

Ensure regular detergent cleaning schedules and procedures are in place using a product which is active against bacteria and viruses.

- Twice daily cleaning and disinfection of frequently touched objects and surfaces (e.g. telephones, keyboards, door handles, desks and tables).
- Ensure that where possible movement of individuals between work stations is minimised and where work spaces are shared there is cleaning between use (e.g. avoid hot desking and instead each individual has a designated desk).
- Clean work vehicles, between different passengers or shifts as appropriate.

Ensure any crockery and cutlery in shared kitchen areas is cleaned with warm general purpose detergent and dried thoroughly before being stored for re-use.

Ensure good ventilation (e.g. keep windows open where appropriate).

Ensure that individuals are aware of and able to follow the hygiene advice.

Ensure that individuals follow the “personal or work travel and physical (social) distancing” guidance.

1.4. Further information on COVID-19 and how to reduce the risk of infection

Additional information can be found on the COVID-19 pages of the NHS Inform website.

A COVID-19 communication toolkit is also available on NHS Inform and contains posters, video and social media posts for organisations to print, use and share.

People who want more general information on COVID-19 but do not have symptoms can also phone the free helpline on 0800 028 2816 (NHS 24).

The helpline is open from 8.00am to 10.00pm each day.

Further HPS guidance for other settings is available on the HPS website.
1.5. Personal or work travel and physical (social) distancing

Physical (social) distancing and stay at home advice is in place for all. You may only undertake travel if you are not showing COVID-19 symptoms or have not been diagnosed with COVID-19 (whether you are showing symptoms or not) and you are not self-isolating. Reasons for travel should be in line with current advice from Scottish Government. Transport Scotland advises people should consider walking or cycling to reduce pressure on the road network and public transport as capacity will be limited to maintain physical (social) distancing.

The general public can use public transport (buses/trams/subways/trains) and private/commercial vehicles (e.g. to get to and from work, food shopping), aiming to maintain 2m physical (social) distancing whenever possible. Where people from different households are sharing a private vehicle (car, taxi, minibus, lorries) then consideration should be given to how physical (social) distancing can be applied within the vehicle, where possible. If you can adhere to physical (social) distancing whilst travelling, then do so. Where this is not possible and you are travelling with non-household members limit the number of passengers and space out as much as possible. Household members can travel together in larger numbers in a private vehicle. People who are in the higher risk category should consider carefully how they can apply the physical (social) distancing advice stringently. People who are shielding should follow the advice on NHS Inform.

The following general infection prevention and control measures should be followed:

- Hand hygiene - use handwashing facilities or, where available, alcohol based hand rub before and after journeys.
- Catch coughs and sneezes in tissues or cover mouth and nose with sleeve or elbow (not hands), dispose of the tissue into a bin and wash hands immediately.
- Pay for tickets online where possible or use contactless payment
- Practice physical (social) distancing. For example, sit or stand approx. 2 metres (6 feet) from other passengers, travel in larger vehicles where possible or use vehicles with cab screens, if available.
- If using public transport, try to avoid busier times of travel to ensure you can practise physical (social) distancing.
- Clean vehicles between different drivers or passengers as appropriate.
- See Transport Scotland for additional advice on how to travel safely.

1.6. Should the general public be wearing medical grade face masks?

It is important to note the difference between face masks and face coverings. Where HPS guidance refers to face masks this means surgical or other medical grade masks that are used in certain health and social care situations. Face coverings are made from cloth or other textiles that cover the mouth and nose, and through which you can breathe (e.g. a scarf).
The use of face masks is not currently recommended for the general population. There is no evidence of benefit to support the use of face masks outside healthcare environments. Face masks may be advised for those diagnosed with or suspected to have COVID-19 to reduce spread of infection in specific situations.

Scottish Government has issued guidance on the personal use of face coverings. Physical (social) distancing, shielding, following stay at home advice, and good hand and respiratory hygiene practices are the key measures for preventing spread of COVID-19 - see section 1.2.

Personal Protective Equipment (PPE) at work

PPE protects the user against health or safety risks at work. It can include items such as safety helmets, gloves, eye protection, high-visibility clothing, safety footwear and safety harnesses. Workplaces should continue to use any PPE required as per local policies (business as usual) to mitigate against non-COVID-19 risks in their setting. The risk of COVID-19 should be managed by good hygiene measures and physical distancing. Note that the use of additional PPE for COVID-19 (outwith healthcare or specific residential settings) is outwith the scope of this guidance. Sector specific guidance has been developed by Scottish Government and can be found at COVID-19: returning to work safely. Note that face coverings are not considered PPE.

1.7. What action needs to be taken if a case of COVID-19 has recently attended your setting?

A risk assessment of the setting is usually not required but under certain circumstances, e.g. there are multiple cases who attended your setting, this may be undertaken by the local Health Protection Team (see Appendix 1) with the lead responsible person.

Advice on cleaning of areas is set out in Section 1.9.

What action needs to be taken if someone becomes unwell with symptoms of COVID-19 whilst on site at your organisation?

In preparation, make sure that all staff and individuals in your workplace/organisation, including children and young people, know to inform a member of staff or responsible person if they feel unwell. The following guidance may need to be adapted to ensure a responsible adult is there to support the individual where required.

If the affected person has mild symptoms they should go home as soon as they notice symptoms and self-isolate. Where possible they should minimise contact with others, e.g. use a private vehicle to go home. If it is not possible to use private transport, then they should be advised to return home quickly and directly. If using public transport, they should try to keep away from other people and catch coughs and sneezes in a tissue. If they don’t have any tissues available, they should cough and sneeze into the crook of the elbow.
If they are so unwell that they require an ambulance, phone 999 and let the call handler know you are concerned about COVID-19. Whilst you wait for advice or an ambulance to arrive, try to find somewhere safe for the unwell person to sit which is at least 2 metres away from other people.

If possible and it is safe to do so, find a room or area where they can be isolated behind a closed door, such as a staff office or meeting room. If it is possible to open a window, do so for ventilation. The individual should avoid touching people, surfaces and objects and be advised to cover their mouth and nose with a disposable tissue when they cough or sneeze, and then put the tissue in the bin. If no bin is available, put the tissue in a bag or pocket for disposing in a bin later. If you don’t have any tissues available, they should cough and sneeze into the crook of their elbow. Where possible, a separate bathroom should be designated for the individual to use. Once the individual has left, follow advice in Section 1.9.

1.8. Contact with a case of COVID-19

Asymptomatic individuals living in the same household as a possible or confirmed case of COVID-19 should follow household isolation (stay at home) advice on NHS Inform. Individuals identified as a contact of a case of COVID-19 (see Test and Protect) should follow advice on self-isolation.

1.9. Environmental decontamination (cleaning and disinfection) after a possible case has left a workplace or other non-healthcare setting

Cleaning and Disinfection

Once a possible case has left the premises, the immediate area occupied by the individual, e.g. desk space, should be cleaned with detergent to remove organic matter such as dust or body fluids then a disinfectant to kill pathogens. This should include any potentially contaminated high contact areas such as door handles, telephones and grab-rails. Once this process has been completed, the area can be put back into use.

Any public areas where a symptomatic individual has only passed through (spent minimal time in), e.g. corridors, and which are not visibly contaminated with any body fluids, do not need to be further decontaminated beyond routine cleaning processes.

Environmental cleaning and disinfection should be undertaken using disposable cloths and mop heads using standard household detergent and disinfectant that are active against viruses and bacteria. Follow manufacturer’s instructions for dilution, application and contact times for all detergents and disinfectants. All cloths and mop heads used must be disposed of and should be put into waste bags as outlined below. The person responsible for undertaking the cleaning with detergent and disinfectant should be familiar with these processes and procedures.
In the event of a blood and body fluid spillage, keep people away from the area. Use a spill-kit if available, using the personal protective equipment (PPE) within the kit or PPE provided by the employer/organisation, and follow the instructions provided with the spill-kit. If no spill-kit is available, place paper towels over the spill, and seek further advice from the local Health Protection Team (see Appendix 1).

In situations where belongings are being removed from the home of a deceased individual, the belongings should first be cleaned with a general household detergent active against viruses and bacteria.

**Personal Protective Equipment (PPE)**

Occupations should continue to use any PPE required as per local policies (business as usual). If a risk assessment of the setting indicates that a higher level of contamination may be present (for example, where unwell individuals have slept such as a hotel room or boarding school dormitory) or there is visible contamination with body fluids, then the need for additional PPE, such as an apron and gloves, should be considered.

**Waste**

Ensure all waste items that have been in contact with the individual (e.g. used tissues and disposable cleaning cloths) are disposed of securely within disposable bags. When full, the plastic bag should then be placed in a second bin bag and tied. These bags should be stored for 72 hours before being put out for collection. Other general waste can be disposed of as normal.

**Laundry**

Wash items in accordance with the manufacturer’s instructions. Use the warmest water setting and dry items completely. Dirty laundry that has been in contact with an unwell person should be laundered separately where possible. Do not shake dirty laundry, as this minimises the possibility of dispersing virus through the air.

Clean and disinfect anything used for transporting laundry with your usual products, in line with the cleaning guidance above.

If you do not have access to a washing machine in your setting, ensure dirty laundry is kept bagged at home for 72 hours before taking to the launderette.

After handling dirty laundry ensure hand hygiene is carried out.

**1.10. Testing for COVID-19**

Scottish Government guidance on coronavirus testing includes who is eligible for a test, how to get tested and the different types of test available. See ‘test and protect’ advice on NHS Inform in relation to testing and also see NHS Inform for further information on accessing testing for COVID-19.
1.11. Foreign travel

UK guidance for British people travelling abroad: Travel advice: coronavirus (COVID-19). Travel advice and country specific information can be found at fitfortravel. Fitfortravel also contains COVID-19: health considerations for travel.

Section 2: Additional Setting-Specific Information and Guidance

2.1. Employers and Businesses

Organisations should follow the advice in Organisational and Workplace Arrangements during COVID-19.

Employees will need your support to adhere to the recommendations on “staying at home”, physical (social) distancing and shielding, to protect them and to reduce the spread of COVID-19 to others.

Certifying absence from work

By law, medical evidence is not required for the first 7 days of sickness. After 7 days, it is for the employer to determine what evidence they require, if any, from the employee. This does not need to be fit note (Med 3 form) issued by a GP or other doctor. Isolation notes are available after completion of the self-help guide for individuals and household members which is available from NHS Inform. Employees can obtain isolation notes as proof of their need to stay off work because of COVID-19. Please ensure that your employees are aware of these arrangements.

Employers must use their discretion around the need for medical evidence for a period of absence where an employee is advised to self-isolate due to COVID-19 in accordance with the public health advice being issued by the government.

2.2. Faith settings

Faith leaders should familiarise themselves with the information from NHS Inform on “stay at home” advice, physical (social) distancing, shielding, and test and protect advice. You should take this advice into account as you support people in your setting and your communities. In addition, you may wish to check if there is faith specific advice that has been issued by your organisation.

Consider carefully how you support individuals in line with physical (social) distancing and shielding advice. People who are following shielding advice should not be visited at home, except in exceptional circumstances.
Faith leaders and helpers visiting someone in their home who is currently well should wash their hands when they arrive and when they leave, either with soap and water for at least 20 seconds, or by using a hand sanitiser. They should also maintain a 2m distance between themselves and the person they are visiting, as per physical (social) distancing guidance.

Faith leaders or helpers providing pastoral care for people who are in care homes or hospitals, should follow advice from staff on infection control. They should consider providing support over the phone.

The Scottish Government have produced COVID-19 guidance on preparation for burial or cremation for religious organisations, faith and cultural groups and COVID-19 guidance for funeral services.

2.3. Educational settings

All schools, local authority early learning and childcare settings, colleges and other educational establishments, have now closed to reduce day-to-day contact with other people, unless they are delivering critical provision to protect certain key groups or activities as defined by the Scottish Government. Private and third sector childcare providers, including childminders, can remain open provided they support only the children of key workers and vulnerable children and wherever possible work with their local authority to do this. The Scottish Government has also issued guidance that sets out the implications for childminding services. Arrangements for these purposes will depend on the arrangements local authorities make for their local areas. It is important to note that these educational settings remain safe places for children. However, the fewer children making the journey to school or nursery, and the fewer children in educational settings, the lower the risk of the virus spreading and infecting vulnerable individuals in the wider community.

Residential educational settings should encourage parents and carers to pre-emptively discuss arrangements for self-isolation should the child need to isolate.

Educational settings continuing to provide services should follow the guidance outlined in Section 1 of this document. Staff should look at how to implement physical (social) distancing measures in the educational setting to help reduce transmission of COVID-19. Detailed advice on physical (social) distancing is available on NHS Inform.

Specific measures

- Handwashing
  - Handwashing should be encouraged before and after any activity, such as meal times, break times and sporting activities.
  - Ensure all staff and children wash their hands with soap and water for 20 seconds frequently.
If children or young people have trouble washing their hands properly, ensure help is available.

- Supervise younger children or those with additional needs if there is any doubt that they are able to do this.
- Ensure adequate and appropriate facilities are available, e.g. that children can reach hand soap etc.
- Encourage children not to touch their face, use a tissue or elbow to cough or sneeze, and use bins for tissue waste.
- Where handwashing facilities are not immediately accessible then consider provision of alcohol based hand rub, e.g. at entry points to the school.

**Physical (social) distancing**

- Adapt physical (social) distancing to your environment: guidance on physical (social) distancing can be found on NHS Inform and practical suggestions on how to implement this on the Scottish Government website.

**Illness**

- Ensure children, carers, staff and visitors such as suppliers who feel unwell or have been diagnosed with COVID-19 (whether they have symptoms or not) stay at home and do not attend your facility.
- In residential special schools and colleges, this means self-isolating.
- If staff or pupils become unwell on-site they should be sent home.

**Environmental cleaning**

- Increase cleaning of surfaces in classrooms, including desks and handles, and within toilet blocks and changing rooms, adhering to guidance on cleaning of non-healthcare settings in section 1.9.
- Facilitate cleaning by removing any hard to clean resources from the environment.

Your local Health Protection Team will provide support to undertake a risk assessment and advice on what measures to take if you have concerns that you have a cluster of COVID-19 cases.

**Universities / Colleges / Higher and Further Education settings**

Consideration should be given to how teaching may be provided at a distance.

In communal settings such as halls of residence, self-isolation advice may need to be applied to other people living in the setting, in a similar way to household contacts. This may apply to others who live on the same floor, share facilities (kitchen or bathrooms) or live in the same building etc. The local Health Protection Team should be contacted to risk assess the situation and provide advice.
Students remaining in halls of residence, following ‘physical (social) distancing’ and ‘test and protect’ advice should consider if returning to a family home would enable them to comply more effectively with current advice. However, they need to consider:

- Implications for household isolation at their alternative place of residence.
- How they would get home safely.
- Whether there are especially vulnerable people at home.

Students planning travel should follow the advice in the Foreign Travel section of this guidance.

2.4. First responders

**COVID-19: guidance for first responders** is available for first responders (as defined by the Civil Contingencies Act) and others who may have close contact with symptomatic people with possible COVID-19. This includes Police officers, Border Force officers, Immigration Enforcement officers and professionals and members of voluntary organisations who, as part of their normal roles, provide immediate assistance to a symptomatic person until further medical assistance arrives. Body bags are not required in terms of COVID-19 risk, but may be required for other, practical reasons, such as maintaining dignity or preventing leakage.

2.5. Funeral directors

Relevant professional guidelines such as the HSE ‘Managing Infection Risks When Handling the Deceased: Guidance for the mortuary, post-mortem room and funeral premises and during exhumation’ should be followed. Body bags are not required in terms of COVID-19 risk, but may be required for other, practical reasons, such as maintaining dignity or preventing leakage. Information on PPE requirements during a post mortem examination can be found on the Royal College of Pathology website - this will be updated should information and advice change.

The Scottish Government have produced the following guidance:

- [COVID-19: guidance for funeral directors](#)
- [COVID-19: guidance for burial and cremation authorities](#)
- [COVID-19: guidance for funeral services](#)
2.6. Hotels and Hospitality Settings

Guests who are self-isolating

If a guest is self-isolating in a hotel or other holiday accommodation, staff members should avoid entering the room. Communication with the guest should take place over the phone to agree arrangements for room service, linen and laundry supply, with such items being left outside the room for the guest to collect. As far as possible staff should avoid close contact (within 2 metres) with self-isolating guests and clean their hands with soap and water or alcohol based hand rub.

Other operational issues

For the routine operation of hotel or hospitality facilities, standard procedures can be used for cleaning cutlery and crockery.

After the room is vacated it should be cleaned and disinfected following the guidance in section 1.9. The linen and waste should be managed as per the guidance in section 1.9.

2.7. Homelessness settings

Those experiencing homelessness are more likely to have pre-existing health conditions that place them at higher risk of serious illness if they are infected with COVID-19. They may also have health conditions that make it more difficult to spot symptoms of COVID-19, therefore extra vigilance on COVID-19 symptoms is required (see section 1.1). The lived experience of trauma and violence, poor mental health and the lack of financial resilience present specific barriers to following general public health advice. These individuals will require more time and liaison through the third sector and local authority homelessness outreach teams.

The following recommendations are for services working with individuals experiencing the following:

- rough sleeping and in a hostel, or in other forms of accommodation, such as hotels, accessed in direct response to public health advice on COVID-19
- homeless and accessing day care settings
- rough sleeping or involved in street based activities such as begging
- homeless and living in mainstream temporary accommodation
- receiving bespoke visiting support to help sustain tenancies

The key measures outlined in previous sections on physical (social) distancing and stay at home advice, shielding, test and protect and infection prevention and control are relevant to this setting. Physical (social) distancing, shielding and self-isolation advice can be found on NHS Inform. People experiencing homelessness are more likely to have difficulty accessing this information and following the advice it provides. The support of frontline staff will be vital to improving access to this information and to help those experiencing homelessness to use it.
At the organisational level, services should consider how best the infection control advice in section 1.3 can be modified for their settings.

People who are unwell and worried about COVID-19 should be asked, or supported to consult NHS Inform and phone NHS 24 (call 111) (or in an emergency 999). See section 1.1 for more details. Calls to NHS 24 are free from phone boxes.

Actions for hostels, day care centres and frontline outreach services

General measures

You need to:

- Ensure frontline staff are aware of COVID-19 guidance outlined in section 1.2.
- Increase access to handwashing facilities including at buildings providing services.
- Provide alternatives to handwashing where not possible, e.g. hand gel where available including for frontline outreach services.
- Provide essentials for general and respiratory hygiene, such as tissues.
- Provide paper based information on the signs and symptoms of COVID-19 (as on NHS Inform). Translated information should be provided if a person’s first language is not English (available on NHS Inform).
- Provide verbal advice to increase awareness of signs and symptoms of COVID-19. An interpreter should be used to provide advice if a person has difficulty understanding English.
- Raise awareness of actions to take if unwell (in line with guidance in section 1).
- Ensure physical (social) distancing is applied across all settings. Adaptations may need to be made, e.g. arrange communal sleeping areas so that individuals are 2 metres apart in a well ventilated room.
- See section 1.9 for details on environmental decontamination, waste and laundry.
- If individuals living in communal settings (e.g. with shared bathroom or kitchen facilities) have possible or confirmed COVID-19 infection, self-isolation advice may need to be applied to others in the setting. The local Health Protection Team should be contacted to risk assess the situation and provide advice.
- Details on use of PPE for health and other care workers can be found in relevant PHS guidance. Table 2 contained within the COVID-19: Infection Prevention and Control guidance, provides details of recommended PPE to be worn by health and other care workers providing direct care (within 2 metres) and supporting individuals who are experiencing homelessness. Requirements for use of PPE are subject to local risk assessment.

Individual measures

- New admissions to hostels, shelters or alternative forms of accommodation should be screened for symptoms consistent with COVID-19, and appropriate accommodation arranged where the individual can self-isolate if they are symptomatic.
Rapidly isolate suspected and confirmed cases and seek clinical assessment as appropriate.

If someone becomes unwell in a day centre, and they do not have a home or room in which to self-isolate, they should be isolated temporarily in an area of the day centre (as described in section 1.7). You should plan for this by identifying a room where individuals can be safely isolated.

If an individual is required to self-isolate, review and risk assess their health and welfare requirements.

Support people to access care and advice in the event of illness.

Consider how best to adapt physical (social) distancing to the needs of the individual.

HPS guidance on Social, Community and Residential Care settings provides information that may be relevant for some homelessness services. See the advice sheet for staff in social, community and residential settings for further information.

Support for self-isolation and shielding

Work closely with local authority, public health, housing and social care teams to identify appropriate local accommodation solutions for people without access to appropriate accommodation that allow for self-isolation and shielding, including practical support such as delivery of essential items such as food and prescriptions.

Consideration should also be given to providing access to telecommunications to facilitate ongoing contact for those who will be particularly vulnerable to the impacts of isolation on mental wellbeing.

Where accommodation solutions are identified within flats or other settings with communal areas/corridors/pathways, support should be given to ensure people are aware that self-isolation and shielding limits movement within these areas.

Consideration should be given to how this access to local accommodation solutions is communicated to people. When someone has completed self-isolation, e.g. after self-isolating for 7 days if they are symptomatic, transition to other accommodation or services will need to be managed sensitively. Individual communication about transition to other accommodation should focus on identifying stable and sustainable accommodation and support options, in line with local rapid rehousing transition plans.

Temporary Accommodation

Those living in mainstream temporary accommodation, should be encouraged to self-isolate in their temporary accommodation if possible.

Frontline outreach and visiting support services

Outreach and visiting support workers should support physical (social) distancing, shielding advice and stay at home (household isolation) advice and review existing arrangements for
safe working. Advice on hand and respiratory hygiene should be strictly followed during and after any visits (see section 1.2).

Visits must be limited to essential visits only. Consider how you can support service users where face to face contact is to be avoided, e.g. regular telephone contact and delivery of supplies. Prior to a home visit for those receiving tenancy support in temporary or permanent accommodation, staff should, if possible, ascertain if a user of the service, or member of the household is following self-isolation (stay at home) or shielding advice via telephone, text or e-mail. If they are following this advice and a visit is deemed essential, then a full risk assessment should be undertaken and documented with managers to decide the best course of action. If during telephone communication to assess their suitability for a home visit, they report symptoms of COVID-19, then a face-to-face assessment should be avoided.

You should consider how to implement physical (social) distancing and shielding advice and ensure that you are aware whether the user of the service belongs to a risk group as outlined in the physical (social) distancing or shielding guidance. Home visits are not recommended for people who are shielding, except in exceptional circumstances.

All services should consider contingency plans for:

- reduced access to or interrupted supply of medicines
- reduced access to or interrupted supply of drugs or alcohol
- greater vulnerability to infection, for example because of poor health and/or drug and alcohol use
- risk of exacerbation of breathing impairment from COVID-19 due to simultaneous substance use, e.g. opioids
- withdrawal support or substitute prescribing as an alternative to using illicit drugs, e.g. opioid substitution therapy
- impact of isolation on mental health
- increased risk of domestic abuse
- non-adherence to physical (social) distancing or household isolation advice
- individuals who sell or exchange sex. Individuals who sell or exchange sex should be advised that COVID-19 can be spread by close contact, including kissing. Close and direct contact should be avoided with anyone with possible or confirmed COVID-19 (whether they have symptoms or not).

Further resources

- **Click Scotland** provides a confidential service to support the safety and wellbeing of women who sell or exchange sex or images in Scotland. NHSGGC has advice around COVID-19 for those who sell or exchange sex [here](#).
- Further support on drug and alcohol issues should be sought from relevant local services. The Scottish Drug Forum has guidance available for people with drug problems at [http://www.sdf.org.uk/covid-19/](http://www.sdf.org.uk/covid-19/). Scottish Health Action on Alcohol Problems has recommendations for alcohol services [here](#) and advice for heavy
drinkers who are thinking about cutting back or stopping drinking during the pandemic here.

Local authorities and other relevant groups should work closely together with local frontline partners to regularly update their resilience plans in line with new advice and information as this is subject to frequent change.

2.8. Gypsy/Traveller Communities

The Scottish Government have produced Coronavirus (COVID-19): framework to support gypsy/traveller communities, a framework to help local authorities and their partners, including the NHS and the third sector, in decision-making in their local response to COVID-19 in relation to Gypsy/Travellers.

2.9. Leisure facilities, entertainment venues and premises used by community groups e.g. scout halls, community centres

Leisure facilities, entertainment venues and community premises are currently closed. Everyone is required to follow physical (social) distancing guidance outlined in section 1 of this document and on NHS Inform. This includes guidance on suggested forms of exercise and limiting social interaction. All gatherings large and small should be avoided.

2.10. Essential Maintenance in People’s Homes

Tradespersons who are carrying out essential repairs and maintenance work in people’s homes can continue to work, as long as they follow the guidance outlined above on physical (social) distancing, shielding, stay at home, and test and protect. They must not work if they or a household member has symptoms or has been diagnosed with COVID-19, or if they have been identified as a contact of someone with COVID-19; they should follow self-isolation advice.

Tradespersons continuing to carry out essential work should follow the advice in Section 1 of this guidance. Additional measures include:

- Contacting occupants in advance of arriving at the property to confirm household members do not have symptoms or a diagnosis of COVID-19, are not self-isolating, and there are no shielded individuals within the property.
- Maintaining a 2 metre distance from household occupants at all times.
- Wash hands using soap and water for at least 20 seconds on entry to the home and when leaving the property. Also wash hands after blowing nose, sneezing or coughing and before eating. If soap and water are not available for handwashing, then alcohol based hand sanitiser should be used.
• Ensure good ventilation in the working area where possible, for example, opening a window or external door.

Where the occupants of the household are isolating or an individual is shielding, maintenance work should not be undertaken. In these circumstances, work must only be completed if there is a direct risk to the safety of the household. Household members and shielded individuals should remain in a separate room for the duration of the visit.

2.11. Transport Sector and Points of Entry

All crew and passengers should have access to and information on measures to reduce the risk of respiratory infections and should follow the guidance in section 1.2 and on NHS Inform.

For UK Border Force officers carrying out duties at ports and airports there is additional guidance for first responders and others in close contact with symptomatic people with potential COVID-19.

Arrivals into the UK and Reporting of Suspected Cases to the Health Protection Team

• You must stay at home, do not travel unless for food, health and essential work or travel.
• Travel advice and country specific information can be found at fitfortravel.

Maritime

Maritime Declarations of Health are already required for all ships arriving from a foreign port and masters of ships will be made aware of any additional requirements through Notices to Mariners.

Port authorities, port operators, ship masters, harbour masters and others involved with the maritime sector should ensure that:

• Guidance on symptoms, risk groups and self-isolation (see section 1.1) is communicated to all staff in all in areas and in appropriate languages. Poster and leaflet materials should be placed in prominent locations and distributed as appropriate.
• Staff/crews are regularly briefed on hand and respiratory hygiene measures that are associated with the prevention of spread of COVID-19, including handwashing and respiratory hygiene (catching coughs and sneezes), and environmental cleaning (see section 1.9).
In addition:

- Ship crews should have a clear line of communication to enable them to report symptoms while on board to enable immediate isolation.

- Cruise companies should give clear instructions to any crews and passengers that they will not be allowed to embark should they have symptoms consistent with COVID-19.

- Cruise companies should give guidance consistent with current UK advice for high risk groups on the importance of **physical (social) distancing** and **shielding** to all current and booking customers.

**Before embarkation**

Crew or passengers with symptoms consistent with COVID-19 should not be allowed on board but directed to self-isolate at home.

All crew and passengers should be reminded of:

- The need to report symptoms consistent with COVID-19 as soon as possible with clear instructions on what they should do and the designated person that they must report to; and

- The importance of hygiene measures including handwashing.

**After embarkation**

The ships master should regularly assess the state of health on board their ship before each port of call. Where an instance of illness is identified then these should be reported at the earliest possible convenience via established channels to the local Health Protection Team of the next port. The suspect case should be isolated until the local Health Protection Team advises otherwise.

**In managing any suspected case the following precautions should be employed:**

**On Board**

- The suspected case should remain isolated in a cabin.

- Medical staff in close contact with a suspected case of coronavirus (COVID-19) should wear the correct PPE, and ensure the PPE is disposed of appropriately. The four nations COVID-19: infection prevention and control guidance describes the Infection Prevention and Control measures required for management of possible/confirmed COVID-19 patients. Table 2 of the guidance details the recommended PPE for those providing clinical care in the primary, outpatient and community settings. Table 4 of the guidance details additional PPE considerations where there is sustained transmission of COVID-19, taking into account individual risk assessment for this new and emerging pathogen.
• All staff should wash their hands with soap and water for 20 seconds immediately after removing PPE, or alcohol hand sanitiser can be used.
• Meals should be left outside the door and normal housekeeping duties suspended.
• Appropriate cleaning, including disinfection, waste disposal and management of laundry should be undertaken (see section 1.9).

On Arrival at the Next Port

Do not disembark the suspected case or any crew or passengers until the local Health Protection Team advises to do so. Where the possible case is a medical emergency then 999 must be called. The local Health Protection Team should also be immediately informed. The possible case, and any crew or passengers, must not be disembarked until the Health Protection Team has advised to do so.

The Health Protection Team will advise on:

• Arrangements for disembarkation for suspect cases;
• Management of other passengers and crew on boards;
• Any disembarkation of other passengers and crew;
• Any recommended measures in terms of reporting, cleaning and respiratory hygiene; and
• Any follow-up monitoring required and where necessary limitations to further travel.

Aviation

All flights into the UK are required to provide health announcements to passengers relating to the current COVID-19 outbreak. Passengers will be advised about appropriate hygiene measures and “stay at home” advice if they develop symptoms. While currently there is no requirement for a General Aircraft Declaration, in the event of a seriously ill passenger being identified then aircraft and airports should follow their extant local health SOPs ensuring the local HPT is informed immediately. Where the case is on an aircraft, then the aircraft should not be disembarked until the HPT have advised to do so.

For seriously ill cases, all airports should identify an isolation area to allow isolation whilst waiting for the local health response. The area will be dependent on local circumstances. Where the possible case is a medical emergency then 999 must be called. The local HPT should also be immediately informed. The suspect case should not be disembarked or allowed to leave isolation until the Health Protection Team has advised to do so.

Performing body or bag searches at Points of Entry

Health Protection Scotland recommend that in addition to measures described in Section 1.2 to minimise transmission of respiratory infections, staff use an alcohol-based hand sanitiser.
If any passengers present who are seriously unwell then local procedures should be followed to ensure the HPT and 999 are notified, and the passenger isolated where possible.

If a passenger becomes symptomatic on-board a vessel, train or aircraft
In addition to co-operating with the local Health Protection Team and Port Authorities (Local Authorities), port and airport operators should keep their transport company operations centre informed of any incidents requiring a HPT response.

2.12. Visit Scotland

Follow the guidance set out in Section 1 of this document including the information on physical (social) distancing. If visitors are unwell, they should be advised to self-isolate. They should not be directed to an A&E department or GP surgery/walk-in centre. If it is a medical emergency, they should call 999 and let the call handler know they are concerned about COVID-19.
